

AUTOMOTIVE MARKET

Document capture solution

Actors of the automotive market
FROM DATA TO CONTENT

powered by
IRISPowercan™

Stop retyping data to enjoy rich contents - Automatic PDF naming based on content of your Car and Truck Industry documents.

Car & truck makers, independent car mechanics, truck mechanics, car & truck retail stores, car service centers and national vehicle car & truck registration services still rely heavily on paper documents such as ID Cards, passports, driving licenses, car repair service sheets, national car ID's, cars certificates of conformity. All your customer documents either electronic or printed are too often then manually keyed again into another electronic system. These manual data entries generate mostly a waste of time with information delays and even human errors on top of hours of documents sorting & searching.

Major Benefits:

- Automatic capture & Zonal OCR for Data Extraction
 - ID Cards & Passport
 - Car & Truck repair service sheet
 - Car certificate of conformity
 - Plate card registration sheet
 - Car & Truck Technical Control registration sheet
 - Truck Serial number identification sheet
- Accurate processing of account opening application files
- Automatic PDF file naming based on document content
- High-volume PDF searchable archives creation
- Avoid data encoding human errors
- Conversion of scanned paper, images, PDFs to editable documents
- Speed up customer registration processes & optimize customer file handling
- Empower your organization with high value-added tasks and avoid document searching
- Ease information sharing across your enterprise instead of wasting time to look for it

IRIS Powerscan™ 10

Document capture solution

A complete solution, from document capture through to business application

Your company receives documents from a variety of channels and in multiple formats. Every single one of them holds crucial business information which needs to be integrated into your company's systems in order to ensure business continuity and kick-start further document processes and workflows. With IRIS Powerscan™ you can rely on a document capture solution that goes the extra mile to not only extract the business-critical information you need, but to also integrate with any of your business applications so that documents are automatically exported in the right format, along with reliable indexed data.

Multi-Channel Capture

Business critical information can arrive at your company through a variety of channels such as mail, files, email attachments. IRIS Powerscan™ offers a single solution to address any of those: it supports most popular scanners (Canon®, Kodak, Fujitsu®, etc.); documents can be captured via an MFP and imported automatically using IRIS Powerscan watched folder feature; it can even import documents from Cloud services such as Box, Dropbox, OneDrive or SharePoint. Powerful image adjustment tools help improve the quality of images by adjusting, contrast and brightness straightening skewed scans, removing unwanted pixels, splitting or merging images, and many more.

Advanced classification and Automatic PDF naming with Zonal OCR

IRIS Powerscan™ is able to scan any document type, from your car and truck industry. Of course, different documents require specific processing; for instance, the indexes required from a car certificate of conformity are not the same as the ones you need from an invoice or from a credit card application. This is why once documents have been scanned or imported, the first step is to determine their type so they can be processed accordingly. IRIS Powerscan™ uses a variety of techniques to perform automatic classification of your incoming documents, such as barcodes, patch codes, OCR/ICR zones, and more. IRIS Powerscan™ even features a powerful layout recognition technology known as IRIS Fingerprint™, which is able to learn the appearance of your various documents and perform identification without the need for text, labels, barcodes or any other conventional method.
